Time to complete

A. General information about the respondent

1. * Country

Angola

2. * Name of organization(s) or entity(s) responsible for the preparation of the report

Ministry of Higher Education, Science, technology and innovation

3. * Website of organization(s) or entity(s) responsible for the preparation of the report

www.mescti.gov.ao

4. * Email address of organization(s) or entity(s) responsible for the preparation of the report

5. Phone number of organization(s) or entity(s) responsible for the preparation of the report

6. Please describe the role/mandate of your organization

Ministerial department responsible for elaboration, implementation monitoring and evaluation of policies of higher education and science, technology and innovation sectors.

7. * Full name of officially designated contact person(s) who completed this survey

Eurico Wongo Gungula/ Alice de Fátima Pinto de Ceita e Almeida

8. * Position of officially designated contact person(s) who completed this survey

UNESCO Focal Point for Open Science/ Secretary of State for Science, Technology & Innovation

9. * Email address of officially designated contact person(s) who completed this survey

10. Full Name(s) of designated official(s) certifying the report

Albano Vicente Lopes Ferreira, Minister of Higher Education, Science, Technology and Innovation

11. Brief description of the consultation process established for the preparation of the report

The consultation process for the preparation of this report involved a multi-stakeholder approach, including academic institutions, research organizations, governmental bodies (Ministry of Education, Ministry of Higher Education, Science, Technology and Innovation, National Commission for UNESCO in Angola), journal editors and librarians. The process included expert roundtable discussions for contributions and thematic workshops to gather diverse perspectives. The collected inputs were analyzed and synthesized to provide a comprehensive overview of the state of open science and its implementation challenges and opportunities.

12. * Name of other organization(s) or entit(y)(ies) (including non-governmental) consulted for completing this survey

UNESCO, Redalyc/AmeliCA, Ministry of Education, Ministry of Higher Education, Science, Technology and Innovation, Foundation for Scientific and Technological Development, National Commission for UNESCO in Angola, Oscar Ribas University, University of Luanda, Agostinho Neto University, Pedagogical Higher School of Bengo, Higher Institute of Educacional Sciences (ISCED-Huila); Lueji A' Nkonde University, Mandume ya Ndemufayo University, Rainha Nzinga A Mbande University, Sol Nascente Polytechnic Higher Institute, Pedagogical Higher School of Bié, University of Katavala Bwila, Clinica Sagrada Esperança. UNI.AO, Expertise France, SUIMAGEM

13. * Website of other organization(s) or entit(y)(ies) (including non-governmental) consulted for completing this survey (Please use commas to separate multiple links, as: link A, link B)

<https://www.unesco.org>, <https://redalyc.org/>, <https://amelica.org>, <https://mescti.gov.ao>, <https://www.med.gov.ao>, <https://cnu.gov.ao>, <https://uor.edu.ao/>, <https://uniluanda.ao/>, <https://www.uan.ao>, <https://www.ispndunduma.co.ao/instituto-superior-politecnico-do-bengo-visita-ispn/>, <https://isced-huila.ed.ao/>, <https://www.ulan.edu.ao>, <https://umn.edu.ao>, <https://uninjingambande.ed.ao/>, <https://www.ispsn.org/>, <https://espbie.ao>, <http://www.ukb.ed.ao>, <https://fundecit.ao/>, <https://www.clinicasagradaesperanca.co.ao/>, <https://ciencia.ao/projectos-mescti/uni-ao>, <https://suimagem.com/>, https://www.expertisefrance.fr/en/fiche-projet?p_p_id=101&p_p_lifecycle=0&p_p_state=maximized&_101_struts_action=%2Fasset_publisher%2Fview_content&_101_assetEntryId=717966&_101_type=content&_101_urlTitle=developper-le-capital-humain-en-angola-lancement-du-projet-retfop&inheritRedirect=true

14. * Email address of other organization(s) or entit(y)(ies) (including non-governmental) consulted for completing this survey

15. Sector of other organization(s) or entit(y)(ies) (including non-governmental) consulted for completing this survey

B. QUESTIONNAIRE FOR MEMBER STATES' REPORTING

ON THE IMPLEMENTATION OF THE 2021 RECOMMENDATION ON OPEN
SCIENCE

Part 1. PROMOTING A COMMON UNDERSTANDING OF OPEN SCIENCE,

ASSOCIATED BENEFITS AND CHALLENGES, AS WELL AS DIVERSE PATHS TO
OPEN SCIENCE

16. 1.1 Has the 2021 UNESCO Recommendation on Open Science been promoted and/or shared with appropriate ministries and institutions as well as affiliated organizations in your country?

☒ Yes

☐ No

17. 1.1 cont. **If yes**, please indicate which ministries and or national authorities/entities have been involved in the promotion of the 2021 Recommendation.

YES. The 2021 Recommendation has been promoted and shared with relevant ministries, institutions and affiliated organizations in Angola. Key entities involved in its promotion include UNESCO, Redalyc/AmeliCA, the Ministry of Education, the Ministry of Higher Education, Science, Technology and Innovation, Foundation for Scientific and Technological Development (FUNDECIT) and the National Commission for UNESCO in Angola. Additionally, several academic institutions have participated in discussions and dissemination efforts, including Oscar Ribas University, University of Luanda, Agostinho Neto University, Pedagogical Higher School of Bengo, Higher Institute of Educational Sciences (ISCED-Huila), Lueji A' Nkonde University, Mandume ya Ndemufayo University, Rainha Nzinga A Mbande University, Sol Nascente Polytechnic Higher Institute, Pedagogical Higher School of Bié, and University of Katyavala Bwila.

18. 1.2 Is the 2021 Recommendation on Open Science available in the national language(s) of your country?

☒ Yes

☐ No

19. 1.2 cont. **If yes**, which language(s)?

Yes. In Portuguese

20. 1.3 Have there been awareness raising activities on open science, including all its key elements[i], associated benefits and challenges, organized or foreseen to be organized by the end of 2025 in your country by national authorities or entities? (ref.: (i) 16.f, 16.g, 16.h)

[i] Please refer to the elements of open science defined in the 2021 Recommendation, namely : open scientific knowledge (including open access to scientific publications, research data, open educational resources, open-source software and code, open hardware), open science infrastructures, open engagement of societal actors and open dialogue with other knowledge systems.

☒ Yes

☐ No

21. 1.3 cont. **If yes**, please provide details on the activities organized or foreseen and links as relevant.

YES. Several awareness-raising activities on open science have been organized and more are planned until the end of 2025, such as: • Workshops and seminars, organized in collaboration with UNESCO, Redalyc/AmeliCA, the Ministry of Education, Ministry of Higher Education, Science, Technology and Innovation, and the National Commission for UNESCO in Angola, focusing on diamond open access, scientific publishing, and research visibility. • Conference on Open Science in the CPLP. • Training programs, conducted at Oscar Ribas University and other academic institutions, addressing open science principles, research data management, and indexing of scientific journals. • National discussions to integrate open science into higher education and research policies. • Planned events and capacity-building programs to strengthen awareness and implementation of open science practices.

22. 1.4 Have specific actions been undertaken or are planned to be undertaken by end of 2025 in your country to incorporate the values and principles of open science[i], in publicly funded research? (*ref.: (i) 16.a, 16.b, 16.c, 16.d, 16.e, 16.h*)

[i] The 2021 Recommendation outlines a set of shared values of open science stemming from the rights-based, ethical, epistemological, economic, legal, political, social, multi-stakeholder and technological implications of opening science to society and broadening the principles of openness to the whole cycle of scientific research. It also provides a set of guiding principles, as a framework for enabling conditions and practices, which uphold the values of open science and can realize the ideals of open science.

Please see the values of open science, namely quality and integrity, collective benefit, equity and fairness, and diversity and inclusiveness.

Please see the guiding principles for open science ,namely transparency, scrutiny, critique and reproducibility; equality of opportunities; responsibility, respect and accountability; collaboration, participation and inclusion; flexibility and sustainability.

☒ Yes

☐ No

23. 1.4 cont. If **yes**, please indicate the actions that are taken to incorporate the specific values and principles. For each case, please provide details and links as relevant.

YES. Several actions have been undertaken and are planned to incorporate open science values and principles in publicly funded research in Angola, including:

- The Foundation for Scientific and Technological Development has incorporated open science principles into its regulations, ensuring that publicly funded research adheres to transparency, accessibility, and collaboration standards.
- The Ministry of Higher Education, Science, Technology, and Innovation (MESCTI) has established a national open-access repository to store and provide free access to publicly funded research, supporting knowledge dissemination and academic collaboration.
- Public universities such as Agostinho Neto University, University of Luanda, and Mandume ya Ndemufayo University are contributing to open-access initiatives and integrating open science principles into their research policies.
- Workshops and training sessions, in partnership with UNESCO, Redalyc/AmeliCA, and the National Commission for UNESCO in Angola, are being conducted to equip researchers with skills in open data management, open-access publishing, and FAIR principles (Findable, Accessible, Interoperable, and Reusable data).
- Efforts are underway to include open science compliance as a criterion for funding eligibility in national research grants.
- Development of national and regional platforms to encourage data sharing and collaboration among researchers across CPLP countries.

Part 2. DEVELOPING AN ENABLING POLICY ENVIRONMENT FOR OPEN SCIENCE

24. 2.1 Does your country have a national policy^[i], strategy or plan of action on science, technology and innovation (STI)?

[i] National STI policy is most commonly a governmental document developed by governing bodies leading the STI policy design and implementation in a given country, which formulates objectives and guides actions and decision-making processes in the area of STI on the national level.

☒ Yes

☐ No

25. 2.1 cont. **If yes**

- please share a machine-readable PDF file of the policy using this link: <https://tinyurl.com/27p5zct8> designating openscience@unesco.org as the recipient, and provide the following information: *Title of the policy, the authority in charge of development of the policy, entities involved and the process of development, year of adoption, year of last update, key areas/sections of the policy, and links to the webpage if available.*

In the comment box, please indicate the question number for this attachment / document.

After uploading, please return to this page to continue the survey.

YES Title of the policy: Política Nacional de Ciência, Tecnologia e Inovação (PNCTI) (2011) (National Policy on Science, Technology, and Innovation) Authority in charge: Ministry of Higher Education, Science, Technology, and Innovation (MESCTI) Entities involved and development process: Government of Angola Year of adoption: 2011 Year of last update: Not updated yet Key areas/sections of the policy: • Chapter 2: Current situation of Science, Technology, and Innovation (STI) in Angola, including economic conditions, education, and key sectors. • Chapter 3: National Science, Technology, and Innovation Policy, outlining the vision, mission, and general and specific objectives. • Chapter 4: Instruments and management of the PNCTI, presenting the general implementation framework. • Chapter 5: PNCTI and new challenges, addressing the future development of STI policy. Webpage/link: <https://lex.ao/docs/presidente-da-republica/2011/decreto-presidencial-n-o-201-11-de-20-de-julho/> Does it include open science elements? • Open access to scientific knowledge: NO – Currently under development. • Open science infrastructure: NO • Open engagement of societal actors: NO – No structured actions involving societal engagement have been implemented yet. • Open dialogue with other knowledge systems: NO – There are no formal initiatives to integrate other knowledge systems, such as traditional knowledge. Additional comments: While the current STI policy does not fully integrate open science principles, efforts are being made to incorporate open-access initiatives and strengthen open science infrastructure through MESCTI's national repository.

26. 2.1 cont. **If yes:**

- does it include any of the following open science elements:

- ☐ open access to scientific knowledge
- ☐ open science infrastructure
- ☒ open engagement of societal actors
- ☒ open dialogue with other knowledge systems

27. 2.2 In your country, is there a policy, or a set of policies and/or legal framework(s)[i] at the national level that address open science or any of its key elements in line with the definition, values and principles outlined in the 2021 Recommendation on Open Science? (*ref.: (i) 16.a, 16.b, 16.c, 16.d, 16.e, 16.h*)

[i] These can include specific national policies, sets of guidelines, rules, regulations, laws, principles, or directions to govern open science practices.

☒ Yes

☐ Partly

☐ No

28. 2.2 cont. **If yes or partly**, please share a machine-readable PDF file(s) of the policy(ies) using this link: <https://tinyurl.com/27p5zct8> designating openscience@unesco.org as the recipient, and provide the following information for each: *Title of the policy or legal instrument, the authority in charge of development of the policy, entities involved and the process of development, year of adoption, year of last update, key areas/sections of the policy, elements of open science that are addressed, and links to the webpage(s) if available.*

YES • Title of the instrument: Decreto Executivo Conjunto n.º 303/22, de 5 de Agosto – Regulamento sobre o financiamento a atribuir pela FUNDECIT à Investigação Científica e Desenvolvimento (I&D)/ (Joint Executive Decree No. 303/22 – Regulation on the Funding Granted by FUNDECIT for Scientific Research and Development (R&D)). • Establishes the terms and general conditions for access, allocation, management, and evaluation of funding provided by FUNDECIT for Scientific Research and Development (I&D) for institutions, projects, and researchers. • Applies to all Scientific Research and Development Institutions (IICD) and other actors, regardless of their purpose, type, or sector, as long as they are integrated into the National System of Science, Technology, and Innovation (SNCTI), in accordance with this decree and other applicable legislation. • Authority in charge: Ministry of Higher Education, Science, Technology, and Innovation (MESCTI) & FUNDECIT (National Fund for Scientific and Technological Development). • Allocated budget: No specify • Elements of open science included: Article 18 – Publicization of Scientific Results: 1. Scientific results from projects funded by FUNDECIT must be disseminated, published and made accessible. 2. Publications must preferably be in the form of full scientific papers, mandatorily in indexed scientific journals that adhere to open science principles, ensuring free and open access to publications. • Links: https://uniluanda.ao/wp-content/uploads/2025/01/DE-303-_-22-de-5-de-Agosto-Regulamento-de-Financiamento-FUNDECIT.pdf This policy represents a structured approach to integrating open science principles into publicly funded research in Angola. Additional measures may be needed to expand infrastructure and societal engagement in open science initiatives. • Challenges: Need for additional measures to expand infrastructure and enhance societal engagement in open science initiatives.

29. 2.3 In your country, are there specific policy instruments[i] that aim to promote open science?

[i] Policy instruments include programmes, methods and mechanisms of technical and operational nature, required to solve the issues set by the policy, with focus on the target beneficiaries, resources, indicators, and set of goals for delivering products (short term), results (medium-term), and impacts (long term).

- ☐ Yes
- ☐ Under development
- ☒ No

30. 2.3 cont. **If no**, please, if possible, briefly explain the reason and the difficulties or obstacles in this area and indicate if there are plans to develop such policy instruments.

Without open science policies, Angolan researchers face difficulties in publicising their work, reducing the impact and citation of their research. The lack of open access limits international collaboration and Angola's insertion into the global scientific community. Researchers, students and institutions may find it difficult to access cutting-edge scientific articles, data and publications due to the high cost of journal subscriptions and closed databases. Without easy access to research and scientific data, the productive sector may face difficulties in developing new technologies and innovations. Without a clear policy for sharing data and publications, national science may have problems with credibility and reproducibility, hindering consistent progress.

31. 2.4 In your country, is there a national implementation plan, strategy, policy or a roadmap for implementation of open science at the national level in line with the 2021 Recommendation? (*ref.: (ii) 17.a, 17.b, 17.c, 17.f, 17.h*)

- ☐ Yes
- ☒ Under development
- ☐ No

32. 2.4 cont. **If yes or under development**, please provide details and links as relevant, including the name of ministries and national authorities/entities, as well as affiliated organizations that are involved in the development and implementation of the plan, strategy or the roadmap.

• Authority in Charge: Ministry of Higher Education, Science, Technology, and Innovation (MESCTI) • Entities Involved: National Fund for Scientific and Technological Development (FUNDECIT) National Commission for UNESCO-Angola Public & Private Universities: Oscar Ribas University, University of Luanda, Agostinho Neto University, Pedagogical Higher School of Bengo, Higher Institute of Educational Sciences (ISCED-Huila), Lueji A' Nkonde University, Mandume ya Ndemufayo University, Rainha Nzinga A Mbande University, Sol Nascente Polytechnic Higher Institute, Pedagogical Higher School of Bié, University of Katavala Bwila. International Partners: □ UNESCO, Redalyc/AmeliCA, CLACSO, Science Europe, CPLP, La Referencia, Latindex, ConFOA • Current Actions: Ministerial Dispatch n° 252/24 (10 Oct 2024) created a working group of experts from different universities to develop the National Strategy on Open Access. Angola participated in the Global Summit on Diamond Open Access (Mexico 2023, South Africa 2024). Angola joined the Global Alliance for Diamond Open Access. Development of MESCTI's national repository as part of open science infrastructure. Decreto n.º 303/22 mandates publication in indexed open-access journals. Ongoing awareness-raising activities on open science. • Planned Steps: Develop an official Open Science National Policy and Strategy. Strengthen national repositories & open-access platforms. Enhance international collaboration on open science. • Links & References: Diamond Open Access Summit UNESCO Article: Angola's Commitment to Open Access o Global Open Access Portal – Angola o Open Access Book (South-South Collaboration)

33. 2.5 In your country, are there policies and/or strategies that promote open science in line with the 2021 Recommendation at **institutional** level, including in the context of research-performing institutions, universities, scientific unions and associations and learned societies? (*ref.: (ii) 17.d, 17.e, 17.g*)

- ☐ Yes
- ☒ Under development
- ☐ No

34. 2.6 In your country, are there specific funding mechanisms[i] for open science at the national level? (*ref.: (ii) 17.j, (iii) 18.j, (iv) 19.c*)

[i] A funding mechanism refers to a policy instrument or process through which financial resources are allocated or provided for a specific purpose. Some examples are block funding, research grants, support for technological poles and centres of excellence, support for science parks and innovation centres, Infrastructure grants (for research facilities, labs, instruments), communication and outreach funds, innovation funds, loans and tax credits scholarships, studentships, fellowships, trust funds, sectoral funds.

- ☐ Yes
- ☒ Under development
- ☐ No

35. 2.6 cont. **If yes or under development**, please provide details and links as relevant.

Angola is in the process of establishing specific funding mechanisms for Open Science at the national level, primarily through government initiatives and international collaborations.

1. Existing and Emerging Funding Mechanisms • FUNDECIT (National Fund for Science, Technology, and Innovation) – Managed by MESCTI, this fund provides financial support for research and development (R&D), including some Open Science initiatives. Legal Framework: Decreto Executivo Conjunto n.º 303/22 (Regulation on Research Funding by FUNDECIT). Article 18: Mandates that scientific results from funded projects be disseminated in Open Access journals. Status: Currently, there is no dedicated budget for Open Science, but the policy requires compliance with Open Access principles. • RAnAA (Angolan Open Access Repository) – Supported by MESCTI, UNI.AO, UNESCO, Redalyc-América, and Expertise France. Funding: Initial support from international partnerships, but national sustainability mechanisms are still under development. • International Collaborations and Grants – Some universities and research institutions secure funding from UNESCO, the European Union, and regional partners for Open Science projects, such as: Capacity-building programs for Open Science. Training workshops for Open Access publishing. Support for the professionalization of academic publishing.

2. Obstacles and Challenges • No Dedicated National Budget for Open Science – While FUNDECIT includes Open Access requirements, there is no specific funding allocation for Open Science infrastructure and activities. • Limited Institutional Funding – Universities and research institutions often lack independent budgets for Open Science platforms and training. • Need for Policy Alignment – Funding mechanisms need to be aligned with the National Open Science Strategy (under development). • Dependency on International Support – Many Open Science projects rely on external funding rather than national sources.

3. Future Plans • Creation of a Dedicated Open Science Fund within FUNDECIT, as part of Angola's National Open Science Policy. • Integration of Open Science Costs into national R&D funding programs. • Strengthening International Partnerships to attract more funding for Open Science capacity-building.

36. 2.7 1.1 In your country, have open science practices[i] been integrated in existing research funding mechanisms?

[i] Examples can include sharing open scientific knowledge (publications, research data, educational resources, software and hardware) with other scientists and with the public, sharing or using open infrastructures, collaboration with other researchers, with national and local societal actors such as policy makers, or sectors such as industry, agriculture, and health, and collaboration and open dialogue with indigenous peoples and local communities.

☒ Yes

☐ No

37. 2.7 cont. **If yes**, please provide details and links as relevant.

YES Open Science practices have been partially integrated into existing research funding mechanisms in Angola, primarily through FUNDECIT (National Fund for Science, Technology, and Innovation). Integration of Open Science in Research Funding • FUNDECIT Regulation (Decreto Executivo Conjunto n.º 303/22) Article 18: Requires that research funded by FUNDECIT must be disseminated through Open Access publications, preferably in indexed scientific journals that are freely and publicly accessible. This means that grant recipients are required to publish their results in Open Access formats as a condition of funding. • Support for Open Science Infrastructure RAnAA (Angolan Open Access Repository): FUNDECIT-supported projects are encouraged to deposit research outputs in this national Open Access repository (<http://ranaa.ao/home>). Collaboration with UNESCO, Redalyc-AmeliCA, and international partners to strengthen Open Access initiatives. • Participation in Global Open Science Initiatives Angola is a member of the Global Alliance for Diamond Open Access. The country co-organized the 2023 Diamond Open Access Summits in Mexico. Open Science commitments published by UNESCO (Angola committed to enhance capacities for Open Access to scientific information). Challenges and Future Plans Despite these integrations, Open Science is not yet fully embedded in all funding mechanisms. Key challenges include: • Lack of a dedicated Open Science budget within FUNDECIT. • Need for clear monitoring and enforcement of Open Access requirements. • Limited national funding for Open Science infrastructure (repositories, platforms, training). To address these, Angola plans to: • Expand Open Science funding streams within FUNDECIT. • Develop a National Open Science Policy to formalize funding and compliance mechanisms. • Strengthen institutional Open Science policies within universities and research centers.

38. 2.8 Have efforts been made or are foreseen to be undertaken by end of 2025 in your country to foster equitable public-private partnerships on open science in line with the 2021 Recommendation? (ref.: (ii) 17.i)

☒ Yes☐ No

39. 2.8 cont. **If yes**, please provide details and links as relevant.

YES Efforts to Foster Public-Private Partnerships in Open Science Angola has been actively working to establish equitable public-private partnerships to promote Open Science. Some key initiatives include:

- Creation of the Angolan Open Access Repository (RAnAA) (<http://ranaa.ao/home>) Partners: Ministry of Higher Education, Science, Technology and Innovation (MESCTI), Expertise France, European Union, UNESCO, UNI.AO, UÓR, Redalyc-AmeliCA.
- Angola's Participation in the Global Alliance for Diamond Open Access Involves: International organizations, universities, and research institutions, along with private sector stakeholders.
- Angola co-organized the Global Diamond Open Access Summits (2023) Location: Mexico (2023), South Africa (2024). Planned Actions by 2025
- Develop a framework for public-private investment in Open Science infrastructure.
- Encourage private sector engagement in Open Science projects through funding support.
- Expand corporate partnerships in Open Access research and data-sharing initiatives.

Challenges and Next Steps

- Limited engagement from private industry in Open Science policies.
- Need for clear regulations to define the role of private entities in Open Science.
- Funding constraints for sustainable Open Science initiatives.

Angola is working on solutions to overcome these challenges and strengthen public-private partnerships by 2025 through targeted policies and international collaborations.

40. 2.9 Is there a national monitoring framework for open science in your country? Or are there specific indicators on open science included in the national monitoring and evaluation framework for STI policy (ref.: (ii) 17.j, 23.c)

- ☐ Yes
- ☒ Under development
- ☐ No

41. 2.9 cont. **If yes or under development**, please provide details and links as relevant.

Angola is in the process of developing a national monitoring framework for Open Science, aligning with the 2021 UNESCO Recommendation. Although a dedicated monitoring system is not yet fully operational, efforts are underway to integrate Open Science indicators into the national monitoring and evaluation framework for Science, Technology, and Innovation (STI) policy. Current Initiatives 1. Integration of Open Science Indicators in STI Policy Monitoring The Ministry of Higher Education, Science, Technology, and Innovation (MESCTI) is working on incorporating Open Science metrics into national STI policy assessment frameworks. Indicators will include: □ Number of Open Access publications in Angola. □ Adoption of Open Science policies by research institutions. □ Participation in international Open Science initiatives. 2. Open Science Tracking Through the Angolan Open Access Repository (RAnAA) RAnAA (<http://ranaa.ao/home>) serves as a key platform for monitoring Open Access publications in Angola. It will contribute data for national reports on Open Science adoption. 3. Participation in Global Open Science Monitoring Efforts Angola has contributed to the Global Open Access Portal (GOAP), which tracks Open Access developments worldwide. Data from Angolan research institutions is included in UNESCO's Open Science monitoring initiatives. Challenges and Next Steps • Lack of standardized national Open Science indicators. • Need for dedicated funding and technical capacity to establish a full monitoring framework. Planned Actions by 2025: Develop and implement a national Open Science monitoring strategy. Establish a centralized database tracking Open Science progress. Strengthen partnerships with international Open Science observatories. Angola aims to finalize a comprehensive Open Science monitoring framework by 2025, ensuring alignment with global Open Science standards.

Part 3. INVESTING IN OPEN SCIENCE INFRASTRUCTURES AND SERVICES

42. 3.1 What is the latest official data for your country's percentage of national gross domestic product (GDP) dedicated to research and development expenditure? Please also indicate the year of publication of this data, and to which year(s) it refers. (ref.: (iii) 18.a)

As of 2015, Angola's gross domestic expenditure on research and development (GERD) was 0,07% of GDP and in 2022, was 0.03% of its GDP. This percentage has remained constant since 2020. In absolute terms, Angola allocated approximately 60 million U.S. dollars to R&D in 2022

43. 3.2 What is the latest official data for the percentage of your country's population that have access to reliable internet and bandwidth? Please also indicate the year of publication of this data, and to which year(s) it refers. (ref.: (iii) 18.b)

As of January 2024, Angola's internet penetration rate stood at 39.3%, with approximately 14.63 million internet users. Regarding internet connection speeds, data from January 2024 indicates: • Median mobile internet speed: 13.99 Mbps • Median fixed internet speed: 19.63 Mbps While specific data on the percentage of the population with access to reliable internet and bandwidth is not readily available, these figures provide an overview of internet accessibility and connection quality in Angola as of early 2024.

44. 3.3 Are there national research and education networks (NRENs)[i] active in the country? (ref.: (iii) 18.c)

[i] A national research and education network (NREN) is a specialised internet service provider dedicated to supporting the needs of the research and education communities within a country.

☐ Yes

☒ No

45. 3.3 cont. **If no**, please, if possible, briefly explain the reason and the difficulties or obstacles in this area and indicate if there are plans to establish them.

NO As of the latest available information, Angola does not have an active National Research and Education Network (NREN). Efforts have been made to establish one; for instance, in 2017, Angolan officials pledged to facilitate the creation of an NREN and apply for membership in the UbuntuNet Alliance by June of that year. ubuntunet.net Additionally, Angola Cables announced an agreement with the West and Central African Research and Education Network (WACREN) in December 2017 to enhance connectivity among research and education institutions. wacren.net Despite these initiatives, Angola remains one of the Southern African Development Community (SADC) countries without an established NREN. ccardesa.org

Challenges and Plans The absence of an NREN in Angola can be attributed to several factors:

- Limited Infrastructure: Developing a dedicated network for research and education requires substantial investment in infrastructure, which may be lacking.
- Funding Constraints: Establishing and maintaining an NREN demands significant financial resources, which might be a barrier.
- Coordination Among Institutions: Creating an NREN necessitates collaboration among various educational and research institutions, which can be challenging to coordinate.

While specific plans to establish an NREN in Angola have been discussed, concrete progress appears limited. Overcoming the challenges of infrastructure development, securing funding, and fostering institutional collaboration is essential for the successful establishment of an NREN in the country.

46. 3.4 Are there national or institutional open science infrastructures[i] in your country? (ref.: (iii) 18.d, 18.e, 18.k, 18.l, 18.m)

[i] Some examples of open science infrastructures include major shared scientific equipment or sets of instruments, open computational and data manipulation service infrastructures that enable collaborative and multidisciplinary data analysis, open science platforms and repositories for publications, research data and source codes, archives, open bibliometrics and scientometrics systems for assessing and analysing scientific domains, open laboratories, software forges and virtual research environments, open innovation testbeds, incubators, science museums, science parks and infrastructure for non-digital materials.

- ☒ Yes
- ☐ Under development
- ☐ No

47. 3.4 cont. **If yes or under development**, please indicate which type(s) of infrastructure:

- ☐ federated information technology infrastructure for open science, including high-performance computing, cloud computing and data storage
- ☒ community managed infrastructures, protocols and standards, for example those that support bibliodiversity and engagement with society
- ☒ platforms for exchanges and co-creation of knowledge between scientists and society
- ☒ community-based monitoring and information systems to complement national, regional and global data and information systems

48. 3.4 cont. **If yes or under development**, for each infrastructure, please provide links as relevant and more information with regard to their compliance with the 2021 Recommendation on Open Science in terms of inclusivity, accessibility, interoperability, community governance, FAIR (Findable, Accessible, Interoperable, and Reusable) and CARE (Collective Benefit, Authority to Control, Responsibility and Ethics) principles. Please indicate if the infrastructure is non-commercial.

YES Angola has been actively developing national open science infrastructures to promote accessibility and collaboration in scientific research. The Repositório Angolano de Acesso Aberto (RAnAA) serves as a centralized platform for collecting, preserving, and disseminating scientific outputs from Angolan researchers. It aims to enhance the visibility and accessibility of Angolan research on a global scale. RAnAA is a non-commercial initiative aligned with the principles of inclusivity and accessibility. It adheres to the FAIR (Findable, Accessible, Interoperable, and Reusable) principles, ensuring that data and publications are easily discoverable and usable. The repository is governed by a community-based approach, involving multiple stakeholders in its management and development. For more information, visit the RAnAA website. The Angolan Open Access Repository (RAnAA) primarily falls under the following categories of open science infrastructure: • Community-managed infrastructures, protocols, and standards: RAnAA supports bibliodiversity and societal engagement by providing open access to Angolan scientific publications. • Platforms for exchanges and co-creation of knowledge between scientists and society: It allows researchers to share and disseminate scientific knowledge produced in Angola. • Community-based monitoring and information systems: The repository contributes to complementing national and regional scientific data and information systems.

49. 3.5 Does your country host or fund any federated regional or international information technology infrastructure for open science? (ref.: (iii) 18.e, 18.f)

☐ Yes

☒ No

50. 3.5. cont. **If no**, are the existing open science infrastructures at regional and international levels accessible to all the relevant open science actors from your country?

☒ Yes

☐ No

☐ Other

51. 3.6 Is your country involved in any North-South, North-South-South and South-South collaborations to optimize infrastructure use and joint strategies for shared, multinational, regional and national open science platforms? (ref.: (iii) 18.g)

☒ Yes

☐ No

52. 3.6 cont. **If yes**, please provide links as relevant and more information, including the name of the infrastructure, date of establishment, language, target groups and beneficiaries, governance/community agreements, scope (e.g. research areas, elements of open science, stage of research, accessibility to all the relevant users in the region or internationally).

YES, Angola is actively involved in North-South and South-South collaborations aimed at optimizing infrastructure use and developing joint strategies for shared open science platforms. Angola is member-state of CPLP, which has an initiative on Open Access Repository for scientific publication of the community; Angola is benefiting from the informatic infrastructure from Redalyc- AmeliCA for capacity development and storage temporary scientific platforms. Since 2020, the Ministry of Higher Education, Science, Technology and Innovation (MESCTI), in partnership with the Óscar Ribas University (UÓR) and the Autonomous University of the State of Mexico (UAEM), through the Network of Scientific Journals of Latin America and the Caribbean, Spain and Portugal (Redalyc) and AmeliCA Open Knowledge (AmeliCA), have an ongoing initiative to improve the visibility of Angolan Scientific Journals and to train Angolan researchers. This initiative has the support of UNESCO and aims to strengthen South-South collaboration, focused on Open Science.

Part 4. INVESTING IN HUMAN RESOURCES, TRAINING, EDUCATION, DIGITAL LITERACY

AND CAPACITY BUILDING FOR OPEN SCIENCE

53. 4.1 Has systematic capacity building on open science taken place in higher education and/or research performing institutions in your country? (ref.: (iv) 19.a, 19.c)

☒ Yes

☐ No

54. 4.1 cont. **If yes**, please indicate if those capacity building initiatives are formal or informal and provide more information and links as relevant.

YES, systematic capacity building on open science has taken place in higher education and research-performing institutions in Angola. Formal Initiatives: • UNESCO and Government of Angola Collaboration (2020): UNESCO, in partnership with the Angolan Ministry of Higher Education, Science, Technology, and Innovation, organized webinars aimed at enhancing capacities for Open Access to scientific information. These sessions focused on creating, managing, and indexing Open Access scientific journals, as well as developing a national Open Access policy. • Open Science Advocacy Workshops (2023): Workshops were conducted to increase education and awareness on the benefits of Open Science, support the development and implementation of Open Science policies, and promote the adoption of Open Science and Open Access practices within African higher education institutions.

55. 4.2 Have capacity building programmes for policy makers on how to integrate core values and principles of open science in STI policies and strategies taken place in your country?

☒ Yes

☐ No

56. 4.2 cont. **If yes**, please provide more information and links as relevant.

YES, capacity-building programs for policymakers on integrating core values and principles of open science into Science, Technology, and Innovation (STI) policies and strategies have taken place in Angola. Key Initiatives: 1. UNESCO and Government of Angola Collaboration (2020): UNESCO, in partnership with the Angolan Ministry of Higher Education, Science, Technology, and Innovation, organized a series of webinars aimed at enhancing capacities for Open Access to scientific information. These sessions provided a platform to discuss mechanisms for creating, managing, and indexing Open Access scientific journals, as well as developing a national Open Access policy. The webinars facilitated discussions on long-term cooperation between UNESCO and the Government of Angola to develop a nationwide Open Access policy, organize capacity-building sessions, and create an Open Science Repository for Angola. Reference: Angola committed to enhance capacities for Open Access to scientific information

57. 4.3 Has a framework of open science competencies been incorporated into higher education research skills curricula in your country, or is it foreseen by the end of 2025? (ref.: (iv) 19.b)

☐ Yes

☒ No

58. 4.3 cont. **If no**, please, if possible, briefly explain the reason and the difficulties or obstacles in this area and indicate if there are plans to do so.

NO, a formal framework of open science competencies has not yet been incorporated into higher education research skills curricula in Angola. Challenges: • Limited Investment in Scientific Research: Due to constrained state budgets and scarce private financing, Angola faces challenges in developing robust scientific research infrastructure. This limitation affects the integration of comprehensive research components, including open science competencies, into higher education curricula. Plans: Recognizing these challenges, the Angolan government has initiated steps to enhance its tertiary education system: • Tertiary Education, Science, and Technology Project (TEST): Launched in December 2023 with support from the World Bank, this 10-year program aims to improve the quality of higher education in Angola. While its primary focus is on enhancing teacher training and aligning graduates' skills with labor market demands, the project also emphasizes strengthening governance within the education system. This initiative lays the groundwork for future integration of open science competencies into higher education curricula.

59. 4.4 Are open educational resources[i] as defined in the 2019 Recommendation on Open Educational Resources, used as an instrument for open science capacity building in your country in line with the 2019 Recommendation mentioned above? (ref.: (iv) 19.d)

[i] Open Educational Resources are learning, teaching and research materials in any format and medium that reside in the public domain or are under copyright that have been released under an open license, that permit no-cost access, re-use, re-purpose, adaptation and redistribution by others (2019 Recommendation on Open Educational Resources)

☒ Yes

☐ Partly

☐ No

60. 4.5 Have there been any initiatives in your country to support science communication in line with open science value and principles with a view to the dissemination of scientific knowledge to researchers of different disciplines, decision-makers and the public at large? (ref.: (iv) 19.e)

☒ Yes

☐ No

61. 4.5 cont. **If yes**, please provide more information and links as relevant.

YES, there have been initiatives in Angola to support science communication aligned with open science values and principles, aiming to disseminate scientific knowledge to researchers across various disciplines, decision-makers, and the general public. UNESCO and Government of Angola Collaboration (2020): UNESCO, in partnership with the Angolan Ministry of Higher Education, Science, Technology, and Innovation, organized a series of webinars to enhance capacities for Open Access to scientific information. These sessions focused on creating, managing, and indexing Open Access scientific journals, as well as developing a national Open Access policy. The webinars facilitated discussions on establishing a network of scientific journals and strategies to improve access to scientific information, significantly contributing to open science capacity building in the country.

Part 5. FOSTERING A CULTURE OF OPEN SCIENCE AND ALIGNING INCENTIVES FOR OPEN SCIENCE

62. 5.1 Have there been any initiatives at the national or institutional level, e.g. by universities and/or research performing institutions, to review the existing research assessment and evaluation processes in order to align them with open science principles and values or are they foreseen by the end of 2025? (ref.: (v) 20.b, 20c, 20i)

☒ Yes

☐ No

63. 5.1 cont. **If yes**, please provide more information and links as relevant.

YES, there have been initiatives at both national and institutional levels in Angola to review and align existing research assessment and evaluation processes with open science principles and values. 1. UNESCO and Angolan Government Collaboration (2020): UNESCO partnered with the Angolan Ministry of Higher Education, Science, Technology, and Innovation to organize webinars aimed at enhancing capacities for Open Access to scientific information. These sessions focused on creating, managing, and indexing Open Access scientific journals, as well as developing a national Open Access policy. The webinars provided a platform to discuss and define mechanisms for accrediting national scientific journals and publishers, assessing training needs for editorial teams, and establishing criteria for indexing journals produced in Angola. These efforts contribute to aligning research assessment processes with open science principles. 2. Open Access Awareness in Higher Education Institutions (2022): A study titled "Open access in Angola: a survey among higher education institutions" investigated the engagement of Angolan higher education institutions (HEIs) with Open Access (OA) to journal publications. The results suggest that while there is moderate awareness of OA among Angolan HEIs, practical incorporation into academic processes, including research assessment and evaluation, has been slow. This indicates a need for further initiatives to fully align research evaluation processes with open science values.

<https://doi.org/10.26448/ae9789893339510.55>

64. 5.2 Have specific clauses that recognize open science practices, including sharing, collaborating and engaging with other researchers and societal actors beyond the scientific community, or dialogue with other knowledge systems, been incorporated in the career evaluation and progression systems or are foreseen by the end of 2025? (ref.: (v) 20.a, 20.c, 20.d)

☐ Yes

☒ No

65. 5.2 cont. **If no**, please, if possible, briefly explain the reason and the difficulties or obstacles in this area and indicate if there are plans to do so.

NO Currently, Angola has not fully incorporated specific clauses that recognize open science practices—such as sharing, collaboration, engagement beyond the scientific community, or dialogue with other knowledge systems—into career evaluation and progression systems. Challenges and Obstacles: • Lack of Established Policies: There is no clear national policy mandating the integration of open science practices into research career assessments. • Limited Institutional Adoption: Universities and research institutions in Angola are still in the early stages of adapting open science principles into academic evaluation frameworks. • Need for Awareness and Capacity Building: Many researchers and institutions require further training and guidelines on how open science contributions can be formally recognized in career progression.

66. 5.3 Have there been any initiatives in your country to recognize and reward open science practices or are they foreseen by the end of 2025? (ref.: (v) 20.a, 20.b, 20.c, 20.e, 20.f, 20.g, 20h)

☐ Yes

☒ No

67. 5.3 cont. **If no**, please, if possible, briefly explain the reason and the difficulties or obstacles in this area and indicate if there are plans to do so.

NO Currently, there are no formal national initiatives in Angola specifically aimed at recognizing and rewarding open science practices. Challenges and Obstacles: • Universities and research institutions have not yet implemented structured policies to incentivize open science contributions. • Many researchers and institutions still prioritize traditional academic outputs, such as indexed journal publications, over open science practices. • There are no government-led or institutional awards dedicated to recognizing open science efforts.

68. 5.4 Have there been any unintended negative consequences[i] of open science practices reported in your country? (ref.: (v) 20)

[i] For example, predatory behaviours, data migration, exploitation and privatization of research data, increased costs for scientists and high article processing charges associated with certain business models in scientific publishing that may be causes of inequality for the scientific communities around the world and, in some cases, the loss of intellectual property and knowledge.

☐ Yes

☒ No

Part 6. PROMOTING INNOVATIVE APPROACHES FOR OPEN SCIENCE AT DIFFERENT STAGES

OF THE SCIENTIFIC PROCESS

69. 6.1 Have there been any initiatives at the national or institutional level that promote innovative, participatory methodological or procedural changes at different stages of the research cycle to increase the openness of the entire scientific process? (ref.: (vi) 21)

- ☐ YES, at the national level
- ☐ YES, at the institutional level
- ☒ YES, at both the national and institutional levels
- ☐ No

70. 6.1 cont. **If yes**, please indicate which of the recommended actions they address:

- ☒ promotion of pre-prints
- ☒ exploration of open peer-review practices
- ☒ valuing and sharing of negative scientific results and associated data
- ☒ participatory methods that value inputs from societal actors, e.g. citizen science, crowdsourcing scientific projects
- ☐ development of participatory strategies for identifying the needs of marginalized communities and highlighting socially relevant issues to be incorporated into research agendas
- ☒ promoting open innovation practices
- ☐ Other

71. 6.1. cont. If yes, please provide more information and links as relevant

YES, at both national and institutional levels. Angola has undertaken several initiatives to promote innovative, participatory methodological, and procedural changes across different stages of the research cycle, aiming to enhance the openness of the entire scientific process. 1. Science, Technology, and Innovation Policy Review: In collaboration with the United Nations Conference on Trade and Development (UNCTAD), Angola conducted a comprehensive review of its science, technology, and innovation policies. This review included mapping the main actors and partners influencing national policies and evaluating existing practices, opportunities, and challenges. Development of participatory strategies for identifying the needs of marginalized communities and highlighting socially relevant issues to be incorporated into research agendas. Reference: Science, Technology and Innovation Policy Review of Angola 2. Open Peer Review and Preprint Evaluation: Angolan researchers have participated in webinars and training sessions focused on open peer review and collaborative preprint evaluation. These initiatives aim to enhance transparency and inclusivity in the peer review process, fostering a culture of open science within the research community. Promotion of preprints and exploration of open peer-review practices. Reference: Open Peer Review, Collaborative Preprint Review, and Opportunities to Learn and Teach Others

Part 7. PROMOTING INTERNATIONAL AND MULTI-STAKEHOLDER COOPERATION IN THE CONTEXT

OF OPEN SCIENCE AND WITH VIEW TO REDUCING DIGITAL, TECHNOLOGICAL AND KNOWLEDGE GAPS

72. 7.1 How is your country promoting and facilitating international scientific collaborations on open science as outlined in the 2021 Recommendation on Open Science? (ref.: (vii) 22.a)

Angola is promoting and facilitating international scientific collaborations on open science through several initiatives aligned with the 2021 UNESCO Recommendation on Open Science. These efforts aim to enhance transparency, accessibility, and inclusivity in scientific research by fostering partnerships at regional and global levels. Key Initiatives: 1. Collaboration with UNESCO, Redalyc/AmeliCA and UNCTAD Angola has partnered with UNESCO, Redalyc/AmeliCA and UNCTAD to develop national science, technology, and innovation policies that incorporate open science principles. These partnerships focus on capacity building, policy alignment, and knowledge-sharing to support the integration of open science into the national research ecosystem. 2. Participation in Open Access and Research Data Initiatives Angolan universities and research institutions are engaging in open-access publishing platforms and open research data repositories to facilitate international collaboration. Some universities are working towards implementing institutional open access policies to align with international best practices. Future Plans and Challenges: • Strengthening digital infrastructure to enhance open data sharing and research accessibility. • Expanding participation in global open science initiatives and repositories. • Overcoming challenges such as funding constraints, digital literacy gaps, and limited national policies on open science.

73. 7.2 Does your country have a strategy or a plan for stimulating cross-border multi-stakeholder collaboration on open science, including with regards to exchange of best practices, capacity building and metrics for open science? (ref.: (vii) 22.b, 22.e, 22.f)

☒ Yes

☐ No

74. 7.2 cont. **If yes**, please provide links as relevant and more information.

YES Angola is taking steps to develop a strategy for cross-border, multi-stakeholder collaboration on open science, with efforts focused on exchange of best practices, capacity building, and open science metrics. While a fully formalized national strategy is still in progress, several initiatives contribute to this goal. Key Initiatives and Plans: 1. Regional and International Collaboration Angola is aligning its policies with UNESCO's 2021 Open Science Recommendation and engaging with Redalyc/AmeliCA, to foster international collaboration. <https://www.unesco.org/en/articles/angola-committed-enhance-capacities-open-access-scientific-information> <https://scienceeurope.org/events/announcing-the-global-diamond-open-access-alliance/> <https://www.unesco.org/en/articles/announcing-global-diamond-open-access-alliance> <https://globaldiamantoa.org/en/home-2/> <https://doasummit.uct.ac.za/> <https://www.goap.info/oa-for-angola> <https://www.unesco.org/en/articles/angola-committed-enhance-capacities-open-access-scientific-information> <https://amelica.org/> 2. Capacity Building and Training on Open Science Angolan universities and research institutions have launched training programs to enhance researchers' skills in open science practices. Government-backed initiatives encourage knowledge-sharing and networking between Angolan and international research institutions. Challenges and Future Directions: Lack of a formalized national open science strategy remains an obstacle. Limited funding and digital infrastructure hinder broader participation. Plans are in place to expand training, enhance collaboration with international institutions, and develop open science policy frameworks.

75. 7.3 Is your country involved in any discussion on the establishment of regional and international funding mechanisms for open science? (ref.: (vii) 22.c)

☒ Yes

☐ No

76. 7.3 cont. **If yes**, please provide links as relevant and more information.

Yes, Foundation for Scientific and Technological Development of Angola (<https://fundecit.ao/>)

Part 8. GENERAL CONSIDERATIONS

77. 8.1 Are there any specific external causes that may impede the implementation of the 2021 UNESCO Recommendation on Open Science in your country?

☐ Yes

☒ No

78. ANY OTHER COMMENTS: If you wish, you may enter any additional comments or information here. You may also contact openscience@unesco.org

Angola is committed to strengthening open science in both the Global South and North, considering its advantages for scientific and technological development. Since 2020, Angola has collaborated with strategic internal and external partners, such as UNESCO, Redalyc/AmeliCA, MESCTI, the National Commission of Angola for UNESCO, and higher education institutions, all focused on discussing and proposing solutions to ensure that scientific knowledge produced with public funds is accessible and recognized as a common public good. Angola's active participation in discussions on global interest topics at the First and Second Global Summit on Diamond Open Access in Toluca (Mexico) and South Africa, alongside international organizations, demonstrates its commitment to this cause. The fact that Angola was recently recognized as a model country in sharing best practices in open science further reinforces our collective commitment to promoting this agenda. This recognition not only highlights the progress made but also challenges us to consolidate and expand initiatives that strengthen science, technology, and innovation in the country and across the African continent. To reverse current indicators and contribute positively to Africa's scientific and technological development, it is essential to intensify efforts in formulating and implementing effective open science policies, ensuring adequate infrastructure, sustainable funding, and greater collaboration between educational institutions, research bodies, and the government.
